1. iPhone/iPad Access

SHIELDeye (IOS version) is an application developed by our company based on the iOS system. You could search and install “SHIELDeye” app from the App store. It is applicable to iPad/iPod and iPhone4s or higher. It supports iOS4.3 or higher. The functional characteristics of SHIELDeye software are as follows:

- Supports IOS 64 bit structure with higher operating speed;
- Supports rapid mobile phone acoustic configuration of camera Wi-Fi;
- Supports PnP products of the Smart P2P cloud;
- Supports viewing on multiple screens (Supports simultaneous viewing of up to 4 cameras);
- Supports Playback SD Card Recording at mobile phone terminal;
- Supports video control, video parameter setting, audio monitoring, intercom, pan/tilt control, picture taking, and other functions;
- Supports searching for and adding LAN equipment;
- Supports editing and management of the equipment (Wi-Fi/Email/Alarm/FTP and other advanced functions);
- Supports photo sharing;

1.2 App Interface Introductions

1.2.1 Interface
Camera: Add camera, camera list and relevant function settings of the camera;
Pictures: View the pictures manually captured on your mobile phone while watching videos on the camera.
Records: View the manual video files on the app and remotely view videos on the SD card.
More: mobile phone acoustic WiFi configuration and reviewing related versions of the app

1.2.2 Add Camera
Start up the “SHIELDeye” app;
Add camera:

Figure 1.2.1
There are three methods available to add a camera:
A. Manually,
B. Scan QR code on the camera body
C. Add by LAN search.

Add by “Scan QR code” and “LAN search”.
   a) Add by "LAN search"

   Figure 1.2.2.2

   b) Add by "Scan QR code". QR code is on the sticker from the bottom of the machine. (See below for the example of the sticker)
